

“Kinetik are responsive and professional and are always proactive in helping us get what is required.”

Katie Butler
Executive

During the Covid-19 pandemic there has been an urgent need for GP’s to provide Oxygen saturation probes to the community. Islington GP federation, who provide healthcare services to all registered patients in the borough did not have enough supply to meet this immense demand.

Islington GP Federation is an organisation jointly owned by the GP practices of Islington formed in December 2015 with the goal of supporting the sustainability and resilience of general practice in Islington and thereby improve the health and wellbeing of patients throughout the borough.

Throughout the pandemic, significant progress is being made on offering alternatives to face-to-face contact. This has helped minimise transmission of infection and is an approach welcomed by patients. Where it is more appropriate, patients are provided with Saturation probes to measure their SpO2 levels, as this is a vital sign that helps identify whether someone may have Covid-19.

Kinetik Wellbeing and Islington GP Federation are working together to provide thousands of Saturation probes to patients remotely in their homes. This has allowed patients to avoid any decline in healthcare provision despite the unprecedented environment that Covid-19 has caused.
